

Ankur Srivastava DSATS Web & Mobile App Development

on April 02, 2020

DSATS offers a range of product development services which include strategy, user experience, cloud architecture, web development & cross platform mobile app development for iOS, Android & PWA apps. Our 55+ strong engineering team includes AWS Certified Solution Architects & Google Cloud Partners.

Our Product Development Process

Discovery Phase

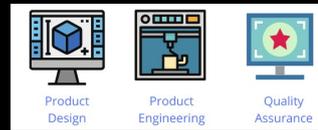

In this phase we will have several calls with the client to understand their product, technology & end user expectations. Based on this exploration and further analysis from our engineering teams, we start working on product strategy, system architecture, wire frames and timelines that are in sync

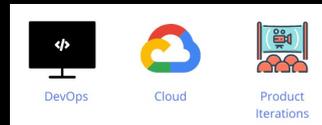

with our clients' expectations.

Engineering Phase

In this phase our User experience, strategy, and design team members work with developers to craft the prototype that will produce the web or mobile app required by the client. Whether it be mobile app development, web engineering, Industry 4.0, data science or other emerging technologies, our AWS certified team members are ready. We follow the Agile Development methodology and divide our projects into six-week sprints.

Launch Phase

In this phase we identify the post launch activities and workflows to ensure that the clients' technology assets are agile enough to support quick business changes and yet stable enough to allow scale of usage patterns. We take pride in supporting our clients for years throughout their entire

technology lifecycles.

Technology & Strategy

- Cutting down your costs and creating a technology framework that will allow you to scale your business operations.
- Assessment of your business operational challenges.
- Identification of your risk ratios.
- Addressing issues related to cash flow and unlocking your balance sheet using technology.

Minimum Viable Product Development

- Ensure the viability of your product with our MVP development services
- Request early adopter feedback at less than 1/3rd of the cost & time required to develop a fully scaled software product
- Get a prototype of your product to attract investor attention.

Web & Cloud Apps

- Web portals & eCommerce stores
- Content management software
- Customized web applications
- Order processing
- Inventory management
- Accounting solutions

User Experience Design

- Responsive designs for a wide range of users
- Designs that are consistent across different devices
- Include wearable devices, such as the Apple Watch, to mobile devices, such as the iPhone, the high-resolution iMac 5k, etc.

Global Delivery & Exceptional Support
